What Sun-Glizide Tablet is used for

Sun-Glizide Tablet is used for the treatment of non-insulin dependent diabetes mellitus.

How Sun-Glizide Tablet Works

The active ingredient in the medicine is 'Gliclazide'. This belongs to a group of medicines called 'sulphonylurea'. It stimulates secretion of insulin by functioning beta islet cells, restoring the early phase insulin secretion, resulting in a physiological release of insulin.

Before you use Sun-Glizide Tablet

When you must not take it

- If you are allergic to Gliclazide or any other ingredients in the product
- If you have insulin-dependent diabetes mellitus
- If you have coma and precoma diabetes
- If you have kidney disease
- If you have liver disease
- If you have severe trauma or infections
- If you have diabetic ketosis or acidosis
- If you are pregnancy or lactating

Before you start to take it

You should check with your doctor:-

- If you are or think you may be pregnant
- If you are planning to become pregnant
- If you are breastfeeding
- If you plan to undergo surgery
- If you have kidney disease

Taking Other Medicines

There are a few medicines which may not mix with Sun-Glizide Tablet. It is important to tell your doctor or pharmacist about all the medicines that you are taking, including those obtained without doctor's prescription. You should talk to your doctor or pharmacist if you are on the following:-

- Beta blockers
 - Antibiotics
 - Thiazide diuretics
 - Adrenaline
 - Corticosteroids
 - Estrogens/oral contraceptives
 - Pain killers
 - Anticoagulants
 - Thyroid hormone products
 - Ulcer healing drugs

How to take Sun-Glizide Tablet

How much to Take

You should take Sun-Glizide Tablet exactly as advised by your doctor or pharmacist. The amount you take each day will depend on your condition. Do not take more or less than what your doctor prescribes.

The usual initial dose for adults is 40 to 80mg daily, gradually increased to maximum 320mg daily if required.

A single dose should not exceed 160mg. Higher doses require twice-daily split dosing.

When to take

Sun-Glizide Tablet is to be taken immediately before meals. Swallow the tablets with some water

How long to take it

It is important to take Sun-Glizide Tablet as long as your doctor prescribes.

If you forget to take it

Do not take extra tablets to make up for a missed dose. Just take your next dose at usual the time.

If you take too much (overdose)

If you take too many tablets by mistake, contact your doctor immediately or seek medical attention.

While you are using Sun-Glizide Tablet

Things you must do

Take Sun-Glizide Tablet exactly the way as prescribed.

Things you must not do

Do not share your medicines with others even if they have the same diagnosis as you

Things to be careful of

If you experience any side effects, consult your doctor or pharmacist for advice

Side Effects

The common side effects are gastro-intestinal disturbances and hypoglycemia.

Symptoms of hypoglycemia include sweating, intense hunger, general weakness and if severe, confusion and coma.

Occasional side effects are skin rashes and intolerance to alcohol.

After using Sun-Glizide Tablet
